

Step 1.1 Motors installation

Please take 1 motor mount plate (left), two M2.5x20mm screws with M2.5nuts, and one L-shape motor. Wires included in the motor set please keep nearby, we will use them later.

Connect motor to the motor plate and fix it using screws.

Good to install two M2.5 shims before installing M2.5 nut, to prevent plastic motor case from damage

Same way build right motor mount.

Left and right motor mounts with motors installed
